

APS Computer POS System

Many of today's merchants need more than just a credit card terminal. They need a complete business solution. In the past, forfeiting the deal to MICROS, Aloha or similar VARs was the only way to accommodate the merchant's needs.

Don't say goodbye to the deal. Say hello to Computer POS Systems, available through APS Innovations and First American Payment Systems!

APS allows merchants to manage their businesses efficiently and easily:

- Integrate accounting, inventory and POS into one simple solution
- Improve customer service quality and speed
- Improve security
- Manage business remotely

APS can also increase your sales revenue:

- **Higher Commissions** – APS sales can yield \$2000-\$6000 for the ISO, and the average merchant buys 3 systems!
- **Higher Residuals** – Merchants looking for a PC-based POS system tend to be higher volume merchants. One ISO offering APS reports that the average monthly volume of their APS customers exceeds \$100,000 per month!
- **Higher Retention** – Because the merchant's accounting, gift card program, inventory system and other APS functions are tied in with the credit card processing, the merchant is much more likely to stay with you for the long run.

To schedule an APS training, to watch a free online demonstration, or for more information, contact APS Innovations at (800) 594-4146 or visit them online at www.apsinnovationsinc.com.
